DIFFICULTIES, recommended configurations...

If web browser doesn't automatically open. Open your web browser; you should be redirected to the Shore Lodge login portal page.

Reboot your computer. Simply rebooting your computer can fix many common issues with connecting to the wireless network.

Make sure your wireless device is enabled. Some laptops have a button to turn off the wireless card to conserve battery life. Please ensure your wireless card is activated.

Enable the network connection. Verify that your Wireless Connection is enabled in your network settings. (If you are using the hotel's wireless bridge, verify the appropriate Local Area Connection is enabled.)

Set your computer to "Obtain IP Address Automatically". Make sure your network card is set to get it's IP and DNS information from DHCP.

Enable "Automatically Detect Settings" in your browser connection settings. If you have a proxy server setup in your web browser (or have it set to automatically detect the proxy), you may be unable to reach the login screen, as it will appear to hang. Disabling the proxy and restarting the web browser should take care of the problem.

Check Firewall settings. If you have a Firewall enabled on your laptop, please ensure it has been configured correctly to allow you to join the network.

VPN passthrough. Our network seamlessly supports a wide variety of VPN clients, however, if you do experience difficulties connecting through your VPN, please contact your IT department to determine any additional settings your corporate network requires. Our technical support team will assist in any way possible to help you meet your VPN needs.
